

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

1-56 (previously canceled).

57. (canceled)

58. (currently amended) The system of claim 57 74, wherein the graphical user interface further includes a web channel guide[[,]] in which the array of the web channels is presented.

59. (canceled)

60. (canceled)

61. (currently amended) The system of claim 57 74, further comprising navigating means for enabling the user to navigate among the array of the web channels.

62. (currently amended) The system of claim 57 74, further comprising displaying means for displaying the graphical user interface.

63. (currently amended) The system of claim 57 74, further comprising web channel identifying means for identifying the web channel being presented, upon presenting the web channel.

64. (currently amended) The system of claim 57 74, further comprising access enabling means for enabling the ~~associating means~~ web channel selection-access enabling element to access an Internet website selected by the user.

65. (currently amended) The system of claim 57 74, further comprising a client device[[,]] including an Internet browser for enabling access to and retrieval of the plurality of the Internet websites.

66. (canceled)

67. (currently amended) The system of claim ~~57~~ 74, further comprising means for enabling the displaying of the web channel guide, wherein the displaying enabling means are further adapted to enable the displaying of the plurality of the associated Internet websites.

68. (currently amended) The system of claim ~~57~~ 74, further comprising a client device, and means for enabling a plurality of the Internet websites associated with the plurality of the web channels to be ~~downloaded and stored in~~ accessed from the client device.

69. (currently amended) The system of claim ~~57~~ 74, wherein each of the plurality of the web channels comprises one of a plurality of the Internet websites which is commonly accessed by the user.

70. (currently amended) The system of claim ~~57~~ 74, wherein each of the plurality of the Internet websites comprises one of the plurality of the Internet websites which is selected for the user.

71. (currently amended) The system of claim ~~57~~ 74, wherein the plurality of the Internet websites associated with each of the plurality of the web channels comprises a group of the Internet websites categorized for the user based on content.

72. (currently amended) The system of claim ~~57~~ 74, wherein the web channel customization enabling ~~means~~ element includes a plurality of customizing buttons, each of which is adapted to be associated with one of the array of the web channels.

73. (currently amended) The system of claim ~~57~~ 74, wherein the web channel customization enabling ~~means~~ element includes a plurality of category buttons[[],] adapted to be associated with each of the array of the web channels.

74. (currently amended) A system for enabling a user to select among and access one of a plurality of Internet websites, comprising:

a graphical user interface, which includes:

an Internet website selection-access enabling element for enabling selection of and access to one of a plurality of Internet websites;

a television channel navigation enabling element for enabling navigation of the one or more television channels;

a web channel selection-access enabling element for enabling selection of and access to one of an array of web channels upon actuating the Internet website selection-access enabling element, wherein each web channel includes a plurality of selectable categories associated with the web channel[[],] and includes a plurality of selectable Internet websites related to and associated with each selectable category; and

a web channel customization enabling element for enabling customization of at least one of the array of web channels upon actuating the web channel selection-access enabling ~~elements~~ element so as to enable selection of one of the plurality of selectable categories associated with the web channel[[],] and selection of one of the plurality of selectable Internet websites related to and associated with each selectable category;

wherein the Internet website selection-access enabling ~~means~~ element comprises a guide button[[],];

wherein the web channel selection-access enabling ~~means~~ element comprises a web channel guide window, adapted to be accessed upon actuation of the guide button, the web channel guide window including an array of web channel buttons, each web channel button being associated with a web channel and adapted to be actuated to enable access to the associated web channel, and including an array of customization buttons, each customization button being associated with one of the array of web channel buttons[[],]; and

wherein the web channel customization enabling ~~means~~ element comprises an Internet program guide window, adapted to be accessed upon actuating one of the array of customization buttons, the Internet program guide window including an array of selectable category buttons[[],] and an array of website buttons associated with each category button.

75. (currently amended) The system of claim 59 74, wherein each of the plurality of the web channel buttons includes a web channel number[[],] and a web channel title representing the associated Internet website.

76. (previously presented) The system of claim 61, wherein the navigating enabling means comprise a remote control device.
77. (previously presented) The system of claim 61, wherein the navigating enabling means comprise a keyboard which includes function keys for enabling navigating among the web channels.
78. (previously presented) The system of claim 61, wherein the navigating enabling means comprise a mouse device.
79. (previously presented) The system of claim 61, wherein the navigating enabling means include means for enabling the user to move up and down among the web channels.
80. (previously presented) The system of claim 61, wherein the navigating means include means for enabling direct access to a selected one of the web channels.
81. (previously presented) The system of claim 62, wherein the displaying means comprise a display monitor.
82. (previously presented) The system of claim 62, wherein the displaying means comprise a television display.
83. (currently amended) The system of claim 63, wherein the web channel identifying means comprise a guide strip[[,]] adapted to be presented upon presenting the web channel.
84. (previously presented) The system of claim 64, wherein the access enabling means comprise a digital cable system.
85. (previously presented) The system of claim 64, wherein the access enabling means comprise a telephone modem.
86. (previously presented) The system of claim 64, wherein the access enabling means comprise a digital broadcast satellite system.

87. (previously presented) The system of claim 64, wherein the access enabling means comprise a web server.
88. (previously presented) The system of claim 72, further comprising an Internet program guide adapted to be accessible through the graphical user interface through use of one of the plurality of customizing buttons associated with one of the array of web channels.
89. (currently amended) The system of claim 73, wherein each of the plurality of category buttons includes a plurality of Internet website buttons, each of which is Internet website button being adapted to be associated with one of the plurality of selectable Internet websites.
90. (previously presented) The system of claim 65, further comprising means for enabling at least one of the plurality of Internet websites to be downloaded and stored in the client device.
91. (previously presented) The system of claim 75, wherein each of the plurality of the web channel buttons includes a uniform resource locator representing the associated Internet website.
92. (currently amended) The system of claim 83, wherein the guide strip is adapted to include a web channel number[[,]] and a web channel title representing the associated web channel.
93. (previously presented) The system of claim 89, wherein each of the Internet website buttons includes an Internet website title representing the associated Internet website.
94. (canceled)
95. (canceled)
96. (canceled)

97. (currently amended) The method of claim 94 103, wherein each of the array of the web channels is adapted to be associated with a plurality of the Internet websites, and wherein enabling the displaying of the array of the web channels ~~display enabling~~ further comprises enabling the selection of one of the plurality of the Internet websites associated with each of the array of the web channels.

98. (canceled)

99. (currently amended) The method of claim 94 103, wherein the system further comprises means for displaying the graphical user interface, and wherein the method further comprises displaying the graphical user interface.

100. (currently amended) The method of claim 94 103, wherein the system further comprises means for identifying the web channel being presented upon presenting the web channel, and wherein the method further comprises presenting a web channel and identifying the web channel being presented.

101. (canceled)

102. (currently amended) The method of claim 94 103, wherein the system further comprises a client device, the client device including an Internet browser for enabling access to and retrieval of the plurality of the Internet websites, and wherein the method further comprises enabling the Internet browser to access and retrieve the plurality of the Internet websites.

103. (currently amended) A method of enabling a user to select among and access one of a plurality of Internet websites and one or more television channels, in a system which includes:  
a graphical user interface[[,]] including:  
means an Internet website selection-access enabling element for enabling selection of and access to one of a plurality of Internet websites,  
means a television channel navigation enabling element for enabling navigation of the one or more television channels,  
means a web channel selection-access enabling element for enabling selection of and access to one of an array of web channels upon actuating the Internet website selection-access

enabling means element, wherein each web channel includes a plurality of selectable categories associated with the web channel[[,]] and includes a plurality of selectable Internet websites related to and associated with each selectable category, and

means a web channel customization enabling element for enabling customization of at least one of the array of web channels upon actuating the web channel selection-access enabling means elements so as to enable selection of one of the plurality of selectable categories associated with the web channel[[,]] and selection of one of the plurality of selectable Internet websites related to and associated with each selectable category[[,]];

wherein the method comprises:

enabling the displaying of the graphical user interface;

enabling the displaying of the array of the web channels;

enabling the navigation of the one or more television channels within the graphical user interface;

enabling the user to select one of the array of the web channels and to obtain access to one of the plurality of the related and associated Internet websites; and

enabling the user to customize at least one of the array of web channels;

wherein the Internet website selection-access enabling means element comprises a guide button[[,]];

wherein the web channel selection-access enabling means element comprises a web channel guide window[[,]] adapted to be accessed upon actuation of the guide button, the web channel guide window including an array of web channel buttons, each web channel button being associated with a web channel and adapted to be actuated to enable access to the associated web channel, and including an array of customization buttons, each customization button being associated with one of the array of web channel buttons[[,]]; and

wherein the web channel customization enabling means element comprises an Internet program guide window[[,]] adapted to be accessed upon actuating one of the array of customization buttons, the web channel customization enabling element including an array of selectable category buttons[[,]] and an array of website buttons associated with each category button[[,]];

wherein web channel selection and Internet website access comprise actuating the guide button to access the web channel guide window and actuating a selected web channel button[[,]] and

wherein web channel customization enabling comprises actuating a customization button to access the Internet program guide window, and actuating a selected category button to select an associated website button.

104. (canceled)

105. (canceled)

106. (currently amended) A system for enabling a user to select among and access one of a plurality of Internet websites and one or more television channels; comprising:

a graphical user interface, which includes:

an Internet website selection-access enabling element for enabling selection of and access to one of a plurality of Internet websites;

a television channel navigation enabling element for enabling navigation of the one or more television channels, wherein television content corresponding to a television channel is displayed when the television channel is selected;

a web channel selection-access enabling element for enabling selection of and access to one of an array of web channels upon actuating the Internet website selection-access enabling element, wherein each web channel includes a plurality of selectable categories associated with the web channel[, ] and a plurality of selectable Internet websites related to and associated with each selectable category; and

a web channel customization enabling element for enabling customization of at least one of the array of web channels upon actuating the web channel selection-access enabling elements so as to enable selection of one of the plurality of selectable categories associated with the web channel[, ] and selection of one of the plurality of selectable Internet websites related to and associated with each selectable category;

wherein the Internet website selection-access enabling element comprises a guide button;

wherein the web channel selection-access enabling element comprises a web channel guide window adapted to be accessed upon actuation of the guide button, the web channel guide window including an array of web channel buttons, each web channel button being associated with a web channel and adapted to be actuated to enable access to the associated web channel, and an array of customization buttons, each customization button being associated with one of the array of web channel buttons; and

wherein the web channel customization enabling element comprises an Internet program guide window adapted to be accessed upon actuating one of the array of customization buttons, the web channel customization enabling element including an array of selectable category buttons and an array of website buttons associated with each category button.

107. (currently amended) A system for enabling a user to select among and access one of a plurality of Internet websites and one or more television channels; comprising:

a graphical user interface, which includes:

an Internet website selection-access enabling element for enabling selection of and access to one of a plurality of Internet websites;

a television channel navigation enabling element for enabling navigation of the one or more television channels, wherein a broadcast corresponding to a television channel is displayed when the television channel is selected;

a web channel selection-access enabling element for enabling selection of and access to one of an array of web channels upon actuating the Internet website selection-access enabling element, wherein each web channel includes a plurality of selectable categories associated with the web channel[[],] and a plurality of selectable Internet websites related to and associated with each selectable category; and

a web channel customization enabling element for enabling customization of at least one of the array of web channels upon actuating the web channel selection-access enabling elements so as to enable selection of one of the plurality of selectable categories associated with the web channel[[],] and selection of one of the plurality of selectable Internet websites related to and associated with each selectable category;

wherein the Internet website selection-access enabling element comprises a guide button;

wherein the web channel selection-access enabling element comprises a web channel guide window adapted to be accessed upon actuation of the guide button, the web channel guide window including an array of web channel buttons, each web channel button being associated with a web channel and adapted to be actuated to enable access to the associated web channel, and an array of customization buttons, each customization button being associated with one of the array of web channel buttons; and

wherein the web channel customization enabling element comprises an Internet program guide window adapted to be accessed upon actuating one of the array of customization buttons, the Internet program guide window including an array of selectable category buttons and an array of website buttons associated with each category button.

108. (currently amended) A graphical user interface comprising:

an Internet website selection-access enabling element for enabling selection of and access to one of a plurality of Internet websites;

a television channel navigation enabling element for enabling navigation of the one or more television channels;

a web channel selection-access enabling element for enabling selection of and access to one of an array of web channels upon actuating the Internet website selection-access enabling element, wherein each web channel includes a plurality of selectable categories associated with the web channel[[,]] and includes a plurality of selectable Internet websites related to and associated with each selectable category; and

a web channel customization enabling element for enabling customization of at least one of the array of web channels upon actuating the web channel selection-access enabling elements so as to enable selection of one of the plurality of selectable categories associated with the web channel[[,]] and selection of one of the plurality of selectable Internet websites related to and associated with each selectable category;

wherein the Internet website selection-access enabling element comprises a guide button;

wherein the web channel selection-access enabling element comprises a web channel guide window adapted to be accessed upon actuation of the guide button, the web channel guide window including an array of web channel buttons, each web channel button being associated with a web channel and adapted to be actuated to enable access to the associated web channel, and including an array of customization buttons, each customization button being associated with one of the array of web channel buttons; and

wherein the web channel customization enabling element comprises an Internet program guide window adapted to be accessed upon actuating one of the array of customization buttons, the Internet program guide window including an array of selectable category buttons and an array of website buttons associated with each category button.
